EMERGENCY EGRESS POST SYSTEM

THIS SYSTEM IS DESIGNED TO WORK IN CONJUNCTION
WITH THE **DYNAMIC** RANGE OF FOLDING DOORS

The Emergency Egress Post System incorporates an Egress Locking Post that houses the opening mechanism and is attached to the door curtain. The Egress Locking Post and the folding curtain are attached to trolley wheels that operate freely in an overhead track.

Features:

- The Egress Locking Post incorporates a Top and Bottom Auto Retractable Locking System.
- Egress is achieved by operating the Egress Handle with one hand in a single downward movement which in turn releases the locking mechanism.
- The Egress Locking Post, and a section of the door curtain, is then able to move freely on an overhead track and trolley system allowing free passage through the doorway.
- The Egress Handle is positioned at a height of 900mm as per regulations.

Special Note:

The Dynamic Emergency Egress Post System is in compliance with sections D2:21 and AS:1428-1998 of the Building Code of Australia.
